

Authored By Jash Mahipal for ECON 196 Spring 2015 Final Project

This directory contains all the do files, which generate the necessary results.

Please follow the order given below:

1. Run importData: imports original data
2. Run cleanData: delete the variables we do not require
3. Run formatData: create new variables of interest that were not part of original dataset
4. Run analyzeData: generates regression results and outputs
